SUMMARY

I am an aspiring LLM engineer with a strong focus on AI security, privacy detection, and real-world AI system development.

As a senior majoring in Artificial Intelligence Cybersecurity at Korea University, I have built hands-on experience across the full AI lifecycle, including data collection, preprocessing, model training, evaluation, deployment, frontend implementation, and technical leadership.

I am particularly interested in solving security-domain problems with LLMs, such as personal information detection, document security classification, and trustworthy AI systems.

I enjoy leading projects, taking ownership of implementation, and turning complex ideas into practical AI services.

EDUCATION

Korea University

- B.S. in Artificial Intelligence Cybersecurity
- Senior, Expected Graduation: 2023~2027

WORK

MarkAny Inc.

- AI Security Intern
- Jan 2026 – Feb 2026
- Joined MarkAny as a scouted intern and worked on AI security-related projects.
- Conducted a proof-of-concept for automatic document security classification based on National Intelligence Service CSO criteria.
- Built and validated a document classification pipeline for internal documents across Confidential, Sensitive, and Public security levels.
- Applied LLM-based data augmentation, fine-tuning, and evaluation strategies to improve classification performance in a security-domain setting.
- Collaborated in validating the practical applicability of AI-based document security classification in an industry environment.

PROJECT

Korean Privacy Detection System

- Tech Lead / AI Engineer / Frontend Developer
- Jul 2025 – Nov 2025
- Led the development of a Korean privacy detection system and took ownership of both AI modeling and frontend implementation.
- Built the full AI pipeline from data collection and preprocessing to model training and Hugging Face deployment.

- Designed and implemented the frontend, dashboard, data visualization features, and user interface.
- Generated labeled Korean training data for 15 PII categories using Korean LLM-based synthetic data generation and Faker-based augmentation.
- Created regex-evasive privacy expressions such as mixed Korean-number patterns and transformed entity formats to improve robustness in real-world scenarios.
- Improved Korean entity recognition performance by applying Kiwi-based morphological tokenization to a RoBERTa-based pipeline.
- Solved severe class imbalance by applying Focal Loss and class weighting, significantly improving recall for sparse entity classes.
- Designed dual evaluation metrics including overall entity F1 and Regex-Hard Entities F1 to better measure real-world privacy detection performance.
- Achieved 93% F1 on regex-hard entities and maintained less than 1%p gap between overall F1 and regex-hard F1.
- Served as technical lead and drove the overall development direction of the project.

SBOM AI Agent

- Team Lead
- Sep 2025 – Nov 2025
- Led the overall development of an SBOM-based AI agent project.
- Directed team meetings, coordinated project progress, and managed overall implementation flow.
- Designed project workflows and flowcharts for the system architecture.
- Took initiative in leading development and communication across the full project lifecycle.

Document Security Classification POC based on National Intelligence Service CSO Criteria

- AI Security Intern / AI Engineer, MarkAny Inc.
- Jan 2026 – Feb 2026

- Conducted a proof-of-concept for automatic document security level classification during an internship at MarkAny.
- Built a deep learning-based classification model to categorize internal documents into Confidential, Sensitive, and Public levels.
- Augmented internal document data with LLM-generated synthetic samples to resolve class imbalance issues.
- Applied Qwen-based LLM fine-tuning with 4-bit quantization and LoRA-based optimization under limited hardware constraints.
- Achieved 96% accuracy and 97% average F1-score on evaluation data.
- Analyzed practical challenges including synthetic data quality, data leakage, OCR extension, long-document processing, and operational automation.
- Proposed deployment-oriented improvements including chunking logic, RAG-based retrieval, OCR integration, hybrid routing, and model optimization.

T-SUM AI Lecture and Project

- Mentor
- Mar 2026 – Jun 2026
- Participated as a mentor in AI lectures and project-based learning activities.
- Supported learners in understanding AI development and project execution.

Life Managers

- Co-founder / LLM Technical Advisor
- 2026 – Present
- Co-founded a startup project focused on building an AI assistant for socially isolated young adults.
- Contributed to LLM development, technical planning, and AI service advisory.

AWARDS

- 3rd KISIA Information Security Developer Hackathon — Excellence Award

    - Aug 21, 2025
- KISIA AI Security Privacy Track Project — Best Team Award
    - Jul 21, 2025 – Nov 7, 2025

ACTIVITIES

KISA Student Monitoring Team for Illegal Personal Information Distribution

- Jul 7, 2025 – Dec 11, 2025
- Participated in monitoring illegal online distribution of personal information.
- Conducted privacy-related monitoring and detection activities involving misuse of personal data.

Overseas Training Program, Tokyo, Japan

- Sejong Software-Centered University Project Group
- Nov 3, 2025 – Nov 8, 2025
- Participated in an overseas training program in Tokyo focused on global technology and industry exposure.

Metacode Data Engineering Bootcamp

- Mar 2026 – Jun 2026
- Studied practical data engineering and AI service development workflows.

InsighTone

- Dec 2026 – Jan 2027
- Worked on MVP planning and validation for a startup idea.

PATENT

- Patent Application No. 2026-0008449
- Intelligent Data Loss Prevention System and Method Using Proxy and Large Language Model-based Context Analysis

---

CERTIFICATIONS

- TOEIC — 860

    - Dec 29, 2024
- AICE Associate
- AICE Basic
- AIDE Level 2
- AI-900

TECHNICAL SKILLS

- Languages: Python, SQL, TypeScript, JavaScript
- AI / Machine Learning: PyTorch, TensorFlow, Keras, scikit-learn, Pandas, NumPy
- LLM / NLP: Transformers, Hugging Face, LangChain, LoRA, QLoRA, PEFT, Unsloth, Prompt Engineering, RAG
- Backend / AI Serving: FastAPI, REST API, Model Fine-tuning, Inference Pipeline Design
- Frontend: React, TypeScript, Three.js, Dashboard Development, Data Visualization
- Tools / Infra: Git, GitHub, Jupyter Notebook, VS Code, Linux, Weights & Biases
- Domain Interests: AI Security, Privacy Detection, Document Security Classification, AI Agents, LLM Applications
